

Most Important

CSS Interview Questions

Programwithfun

Hey Everyone

In this post I'll share some most important CSS interview questions.

In the next post I'll share some questions about Javascript and so on.

If you want answers you can just google them.

CSS

Q1.) What are the different states of a link element?

Q2.) Explain the concept of CSS inheritance.

Q3.) By default, all properties are inherited. True or False?

Q4.) Write down some shorthand properties you can think of.

Q5.) Explain the difference between inherit and initial

Q6.) Whenever the specificity level of 2 selectors are the same, what are the most common implications of that? Can you give an example?

Q7.) Explain what is the rem unit and how it works.

Q8.) Write down the equivalent of margin: 1rem 2rem 1rem.

Q9.) Explain in simple words what is the meaning of "responsive CSS".

Q10.) Explain the difference between relative units and absolute units.

Q11.) Explain what is the em unit and how it works.

Q12.) User agent or Browser specific styles have more importance than author styles. True or false?

Q13.) Is it a good practice to include ID selectors and why?

Q14.) Can we override inline styles that marked as !important?

Q15.) In respect to specificity, is the universal selector (*) and combinators (>, +, ~) selectors have any effect on specificity? For example is h1 ~ p more specific than p?

Q16.) In respect to specificity, are pseudo-class or attribute selectors more, less or of equal importance than the class selectors?

Q17.) What is the difference between unitless values and the ones with specified units.

Q18.) In case of conflicting declarations which one of the following order of precedence is correct when applying styles and why?

Different script origin or importance -> Inline Styles -> Order of Styles declared

Selector Specificity -> Inline Styles -> Order of Styles declared

Inline Styles -> Order of Styles declared -> Selector Specificity

Q19.) Explain what is the rem unit and how it works.

Q20.) How can we set the root element font-size to be 12px in em?

Q21.) Explain what are the vmin and vmax units.

Q22.) Explain what is the viewport and what it includes.

Q23.) What are the dangers of setting a specific height property in an element?

Q24.) How can we make percentage-based heights to work?

Q25.) How do negative margins work?

Q26.) List some ways to stop margins from collapsing.

Q27.) You are trying to set a vertical-align property to an element but does not work. What is the most common reason?

Did you find this post a bit helpful?

If yes then giving a like and following this page would mean world to me.

👋 Hi, I'm Shubham and I design and develop websites.
